
Chornco has conducted product trials and established testing protocols with many collaborators over its history. Third party arms length testing has been conducted by laboratory facilities as well as in work environments around the world and across key industries. Through this extensive validation testing, performance claims have been repeatedly confirmed. Chornco's fundamental vision to develop and prove a range of myth busting multifunction fuel additive products has been achieved. In search of a better solution, against widely held skepticism, all the testing and trials demonstrate **Chornco fuel additives do work.**

The following organizations are representative of those that have participated in the validation of Chornco Products. Complete test and trial reports may be available upon application to Chornco. Email request to info@chornco.com.

Standards Testing Facilities – Government, Independent & Academic

Intertek Caleb Brett – Worldwide testing facilities
California Environmental Engineering, California, USA - USEPA recognized test facility
